

Fix Your Shopify Social Preview

Why this matters

Every time someone shares a product or page from your Shopify store on LinkedIn, X, or Facebook, a preview card shows up. If you have not set it up, the platform guesses what to show, and it usually does not pick your best image or describe your product well.

Getting this right means every shared link works like a mini ad for your store. Let's make sure yours does.

Before you start

You will need admin access to your Shopify store and a preview image at 1200 x 630px. No apps or code required.

Step 1 - Sort out your homepage first

Your homepage preview is the most visible one since it is what shows up whenever someone shares your store's main URL. It also acts as the fallback for any page that does not have its own image, so it is worth getting right before anything else.

- 1 Log into your Shopify admin
- 2 Go to Online Store, then Preferences
- 3 Scroll to the Social sharing image section and upload your 1200 x 630px image
- 4 Scroll up to the Title and meta description section
- 5 Fill in your homepage title (50 to 60 characters) and meta description (up to 160 characters)
- 6 Click Save

Good to know

This sets your og:image, og:title, and og:description for the homepage all at once. Any page on your store that does not have its own image will fall back to this one.

Step 2 - Update your product pages

Products get shared a lot, whether it is someone sending a link to a friend or posting it on social media. Each product page can have its own preview title and description, and Shopify will use your first product image as the preview image automatically.

- 1 Go to Products in your Shopify admin
- 2 Open the product you want to update
- 3 Scroll to the bottom and find the Search engine listing section
- 4 Click Edit
- 5 Fill in the page title and meta description
- 6 Click Save

Watch out for this

Shopify uses your first product image as the og:image. If that image is square or portrait, it will crop awkwardly into the wide 1200 x 630px preview format. Try to make sure your hero product image looks good at that ratio, or design a specific one for it.

Step 3 - Do the same for collections and other pages

Collection pages and standalone pages like your About or landing pages follow the same process. They do not have a dedicated OG image field, so they will fall back to your homepage image, but you can still give each one its own title and description.

For collection pages:

- 1 Go to Products, then Collections
- 2 Open a collection and scroll to the Search engine listing section
- 3 Fill in the page title and meta description, then Save

For other pages:

- 1 Go to Online Store, then Pages
- 2 Open a page and scroll to the Search engine listing section
- 3 Fill in the page title and meta description, then Save

Step 4 - Get your image size right

One size covers every platform. Design to 1200 x 630px and you will not have to think about this again.

Platform	Recommended size
X (Twitter)	1200 x 630px
LinkedIn	1200 x 627px
Facebook	1200 x 630px
Safe zone	Keep text and logos within the centre 1000 x 530px

Canva has a pre-sized template called Facebook link image that works perfectly. Just export at 1200 x 630px and upload it.

What Shopify adds to your page

When you fill in those fields, Shopify quietly drops this into your page's head tag. You never need to touch it yourself, but it is useful to know it is there.

```
<!-- Open Graph (Facebook, LinkedIn) -->

<meta property="og:title" content="Your page title" />

<meta property="og:description" content="Your description" />

<meta property="og:image" content="https://yourstore.myshopify.com/image.jpg" />

<meta property="og:url" content="https://yourstore.com/page" />

<!-- Twitter Card -->

<meta name="twitter:card" content="summary_large_image" />

<meta name="twitter:title" content="Your page title" />

<meta name="twitter:description" content="Your description" />

<meta name="twitter:image" content="https://yourstore.com/image.jpg" />
```

Check how it actually looks

Once you have saved your changes, head over to **eloho.dev/freebies/social-preview** and paste your URL in. You will see exactly what your link looks like across X, LinkedIn, and Facebook, and get a clear breakdown of anything that still needs attention.

Shopify saves changes immediately, but platforms cache previews for a while. If something still looks stale, use each platform's refresh tool:

- Facebook: Sharing Debugger at developers.facebook.com/tools/debug, click Scrape Again
 - LinkedIn: Post Inspector at linkedin.com/post-inspector, click Inspect
 - X (Twitter): Card Validator at cards-dev.twitter.com/validator
-

Before you call it done

- Homepage social sharing image set in Online Store, then Preferences
- Homepage title and meta description filled in
- Top product pages have their own page title and meta description
- Product hero images look good at the 1200 x 630px ratio
- Collection and page meta descriptions filled in
- Checked with eloho.dev/freebies/social-preview

Done? Run your other pages through too.

It is easy to fix the homepage and forget the rest. Paste any URL into eloho.dev/freebies/social-preview and you will see exactly what shows up when that page gets shared.
