

Fix Your Wix Social Preview

Why this matters

When someone shares a link to your Wix site on LinkedIn, X, or Facebook, a preview card shows up in their feed with a title, description, and image. If you have not set this up, Wix either guesses what to show or leaves it blank, and neither is a good look.

The good news is Wix has a straightforward way to fix this for every page on your site. Let's get through it.

Before you start

You will need access to your Wix dashboard and a preview image at 1200 x 630px. No code needed.

Step 1 - Set your site-wide social image

This is the image that shows up whenever a page is shared without its own specific image set. It is your brand's default card, and it is the first thing to sort out.

- 1 Log into your Wix account and go to your dashboard
- 2 Click Marketing and SEO in the left sidebar
- 3 Select SEO Tools, then Social Share
- 4 Upload your 1200 x 630px image as the default social image
- 5 Fill in a default title and description
- 6 Click Save

Good to know

This default image is your safety net. Any page that does not have its own social image set will fall back to this one, so make it something that represents your brand well.

Step 2 - Set previews for individual pages

For pages you expect to be shared, like your homepage, a services page, or a portfolio piece, you want a preview that actually reflects what is on that page rather than the generic site-wide default.

- 1 Go to your Wix Editor
- 2 Click on the page you want to update from the Pages menu
- 3 Click the three dots next to the page name and select SEO Basics
- 4 Fill in the page title (under 60 characters) and meta description (up to 160 characters)
- 5 Scroll to the Social Share section
- 6 Upload a specific 1200 x 630px image for this page
- 7 Click Save, then publish your site

Worth the extra few minutes

Go through your most important pages and do this for each one. A page about your services should not show the same card as your homepage when someone shares it.

Step 3 - Sort out your blog posts

If you have a Wix blog, each post can have its own social preview. Wix will use your post cover image as the preview image by default, so make sure it is sized correctly.

- 1 Go to your Wix dashboard and open the Blog section
- 2 Open the post you want to update
- 3 Click the three dots and select SEO
- 4 Fill in the SEO title and meta description
- 5 Make sure your post cover image is at least 1200 x 630px
- 6 Click Save

Wix blog tip

Wix uses your post cover image as the og:image automatically. If you want a different image specifically for social sharing, you can set it separately in the SEO panel for that post.

Step 4 - Get your image size right

One size covers every platform. Design to 1200 x 630px and you will not have to think about this again.

Platform	Recommended size
X (Twitter)	1200 x 630px
LinkedIn	1200 x 627px
Facebook	1200 x 630px
Safe zone	Keep text and logos within the centre 1000 x 530px

Canva has a pre-sized template called Facebook link image that works perfectly. Just export at 1200 x 630px and upload it.

What Wix adds to your page

When you fill in those fields, Wix drops this into your page's head tag automatically. You never need to touch it yourself, but it is useful to know it is there.

```
<!-- Open Graph (Facebook, LinkedIn) -->

<meta property="og:title" content="Your page title" />

<meta property="og:description" content="Your description" />

<meta property="og:image" content="https://yoursite.wixsite.com/image.jpg" />

<meta property="og:url" content="https://yoursite.com/page" />

<!-- Twitter Card -->

<meta name="twitter:card" content="summary_large_image" />

<meta name="twitter:title" content="Your page title" />

<meta name="twitter:description" content="Your description" />

<meta name="twitter:image" content="https://yoursite.com/image.jpg" />
```

Check how it actually looks

Once you have saved and published your changes, head over to eloho.dev/freebies/social-preview and paste your URL in. You will see exactly what your link looks like across X, LinkedIn, and Facebook, and get a clear breakdown of anything that still needs attention.

Wix publishes changes when you hit Publish, but platforms hold on to cached previews for a while. If something still looks stale, force a refresh:

- Facebook: Sharing Debugger at developers.facebook.com/tools/debug, click Scrape Again
 - LinkedIn: Post Inspector at linkedin.com/post-inspector, click Inspect
 - X (Twitter): Card Validator at cards-dev.twitter.com/validator
-

Before you call it done

- Site-wide default social image set in Marketing and SEO, then Social Share
- Homepage has its own title, description, and social image
- Key pages have their own title, description, and social image
- Blog post cover images are at least 1200 x 630px
- Important blog posts have their own SEO title and description
- Checked with eloho.dev/freebies/social-preview

Done? Run your other pages through too.

It is easy to fix the homepage and forget the rest. Paste any URL into eloho.dev/freebies/social-preview and you will see exactly what shows up when that page gets shared.
